

How to start making an online income
for

LESS THAN \$7

Starting

TODAY

Trevor Greenfield

Hello and welcome,

I'm often asked how, or even if, it's possible to get started making money online with little or no investment.

The quick answer to that question is - yes it is. But, I do need to add a couple of riders to that answer.

It is probably not possible to start with NO money and I do suggest that if possible you do invest some money in premium versions of what I'm about to suggest to you if you are able.

Having said that, it is possible to start making some money online and build from there, even if you have very little start-up capital.

The method that I'm going to teach in this report isn't going to make you rich overnight and it will require you to put in some effort, but it will make you some money.

I hope you get some benefit from this report and as always, if you have any questions please get in touch with me via my support desk.

[Link to my support desk here](#)

Kind regards,

Trevor Greenfield

Why Do People Fail To Make Money Online

Around 95%, or more, of the people that come online to make money fail to do so.

Can you believe that?

That's a staggering number of people, and what's sad about that figure is that it represents broken dreams and in most cases it represents pain and upset.

Most of those people come online to make money because they NEED to make money.

I get people writing to me who have lost their jobs. As I write this, a major supermarket chain here in the UK is laying off 4500 people and so far this year they have already got rid of 13,500 jobs.

Then there is the growing group of people who are at or nearing retirement age who can see that their pensions will not support them in retirement.

At the other end of the scale there are students who are graduating from University with good degrees who can't get a job.

So as you see, there are a lot of reasons why people need a way to make money but why do they fail to make money online?

There are a number of reasons for this, as you'd expect.

There is a percentage of those people who have fallen for the hype of one of the many 'so-called' gurus who told them that you just need to click a few buttons on your keyboard and they'll be making millions.

When they realise that this is a lie, they get discouraged and quit.

Hopefully, that's not you because I'm certainly not going to tell you that.

Then there are a bigger group of people who are prepared to put in the effort needed but just can't get their head around the technical aspects of building an online business and don't have the money to pay someone to do it for them.

This report is aimed specifically at that group of people.

So, if that sound like you and you're still with me, let's get started.

What you need in Your Web Business

There are a few basic elements that you must have in place in order to make money online.

At its most basic you only need two things, an offer and a customer. However, you then need a way to get your offer in front of the customer so that adds another element.

So here's your list to get started;

- You need an offer – a product or service to sell
- You need a website to list the product or service on
- You need a domain name for your website
- You need a way to send visitors to your website to buy your product or service

... and that's why lots of people fail.

Most people don't have a product or service to sell and don't know how to go about creating one.

Most people don't have the skill to build a website (or don't think they do – more on this later).

Getting a domain name costs some money but is usually within what most people can afford.

Then sending visitors is either costly, if you go for the paid option, or takes a long time if you rely on getting a good position in Google.

So what's the answer?

How can you do all of that for less than \$7 today?

Let's start to break down our list and look at some options.

You Need A Product Or Service To Sell

In order to make any money in any sort of business you have to sell something to someone. That's the basic rule of business.

However, it doesn't mean that the product or service you decide to sell has to be your product or service.

It can be someone else's product or service that you get paid a commission for selling.

This is called affiliate marketing and is one of the ways that many people make their income online.

The great thing about affiliate marketing is that it doesn't normally cost you anything to get started.

One of the top affiliate networks is [Clickbank](#) and they also have the biggest range of products or services to choose from.

Your first task is to sign up for a Clickbank account so that you can select your product or service to promote.

[Here's the link to sign-up to Clickbank](#)

That takes care of finding something to promote and has cost you nothing.

You need a website to list the product or service on

This is the part that you will need to invest a little money in. You can pay a lot of money for website hosting and what you end up with can vary considerably in quality and reliability.

My recommendation is that you use the company that I've been using for many years and who have the best quality of service, support and reliability that I've found anywhere.

They have servers in both the US and the UK so you can choose which country suits you best depending on where you are located.

They provide secure servers as standard for all of their hosting accounts. This is a major consideration so let me explain this in a bit more detail.

A secure server has a SSL certificate. You may have noticed that when you are at the shopping cart about to put your credit card information in that the website address at the top of the page has https:// in front of the web address instead of http://.

This tells you that this website is secure and has protection in place to prevent you credit card information being stolen by a hacker.

It's a very important requirement when anyone is selling anything online that they invest in a SSL certificate and that the shopping cart part of their website, at least, is protected by a secure server with an SSL certificate.

It was always fine if the rest of your website ran on a normal server as long as the part where people entered card details was protected.

It was, that is, until towards the end of 2018.

Google made an announcement that going forward any websites not using an https:// (secure server) would be flagged as insecure.

Not only that but industry insiders were of the opinion that Google would also start to drop sites not using SSL down the search listings.

That's why the decision by D9 Hosting to include https:// for all the websites that they host is so important.

Other hosting companies still charge a lot of money for this. Not only that but if you have a hosting account that allows you to register addon domains you need to buy a certificate for all of your addon domains as well.

Addon domains allow you to host several websites on the one hosting account and is a good way to increase your web properties.

Addon domains isn't something that we're concerned about as we get you started but is a consideration for the future.

I suggest that you start with their D9ONE package. There's currently an offer running where you save 40% off your first month's hosting to help you get started.

[Go Here For US Hosting](#)

[Go Here For UK Hosting](#)

That takes care of your website and is the only expense so far. Let's now look at the next item, your domain name.

You need a domain name for your website

Here I have some good news for you. If you take my advice and choose D9 Hosting as your website host, you also get a free domain name as a welcome gift.

This offer applies to these extensions only, *.com*, *.net*, *.org*, *.biz*, *.info*, *.us*, *.name*, *.co.uk*, *.org.uk*, *.me.uk* but my advice would be to go for a *.com* if possible or a *.co.uk* if your website is targeted to the UK only.

OK, let's take a step back and review what we've achieved so far.

You've gone to Clickbank and opened an affiliate account

You've gone over to D9Hosting and selected a hosting plan.

You've registered a domain name as part of getting a hosting plan.

You're making good progress towards your goal of building an online business for under \$7.

Let's move on.

Putting it all together

OK, all that's left to do now is to select a popular product on Clickbank that's selling well, create a webpage to sell it and drive traffic to that page.

I say "ALL that's left to do" but those are the things that can leave newbies to online marketing and especially those who are not technical out in the cold wondering how they will ever be able to fulfil their dreams of making, at least, a little money online.

Well, I have a solution to this problem but before I go into what that is, let me explain the way that this stage should be done.

Your main goal when marketing online should be to build a list of subscribers and over time develop a relationship with those subscribers.

Your subscriber list is the most valuable asset you have as an online marketer.

Now, you will get told by people who are considered gurus (an overused expression that applies to very few people in any field) that building a list and emailing them is old school and that social media or some other latest, greatest system is the way to go.

They are usually telling you this by sending you an email – which proves my point I think.

So, ignore all of the doom and gloom about building a list and make it your top priority as soon as you can.

To build that list you will need to invest in an autoresponder service, like [Aweber](#) or [Getresponse](#), so that you can create a sign-up box to add to your website.

We normally create what's known as a squeeze page or landing page to display our sign-up form. That page is specifically designed to encourage our visitors to join our mailing list in exchange for a valuable and relevant free gift.

I have a free report all about creating a squeeze page which you can download [here](#).

Once you have your squeeze page created, the next stage is to send visitors to that page using either free or paid traffic.

I'm a big believer in paid traffic because it gives me immediate results but the theme of this report is all about getting started making some income for less than \$7 so this will have to wait until later.

My less than \$7 method

To remove as many of the obstacles to making money online as possible, I started to scour the web for a way that even complete newbies with little or no money to invest could get started.

Finally, after going down several blind alleys, I found something that ticked all of the boxes.

You still need to register a domain and get hosting in the way I've described earlier.

I didn't look for free hosting because I feel it would put your future success at risk.

I see the method that I'm about to describe as a way of getting started. I expect that you will expand from here in the future as you gain experience and start making some money to invest in your business.

Because of that I feel that good solid hosting for your website and domain is vitally important.

OK, so how do we take care of getting content on our website and getting visitors to it?

We get someone else to provide the website content for us.

For that, I found a top selling product on Clickbank that provides a free fully built website every month that we just need to upload to our hosting account.

That product is [Free Monthly Websites 2.0](#) from John Thornhill and Dave Nicholson.

You can join this program for no cost and get a new free website every month that is fully developed and ready to start building you an income.

[>> Join The Program Here](#)

When you go there you'll see that there are 2 options to choose from.

There's the free option, which will provide you with a complete site every month that you can upload to your website hosting.

And there's also a option where for a small \$10 a month subscription you unlock additional features to enhance what you already have, you get additional training to help you make the most of your websites and premier support (even telephone support if you need it).

What's more, they will even upload the site for you if you want them to.

These websites are content rich, cash generating websites that earn you affiliate commissions from multiple affiliate sources.

They are optimised to generate you affiliate commissions and they also show you how to get free traffic to your new site.

I've been online now for over 20 years and can remember how difficult it was to do any of this when I first got started.

Most of the things we take for granted today were simply impossible to do when I got started.

You had to learn how to code websites using html for a start. Later Microsoft created a software program called Frontpage to build our websites with but it was still a very painful experience.

There was no such thing as Wordpress back then.

This service from John Thornhill is the easiest option I've seen to date.

In this report I've shown you how for an initial investment of less than \$7 you can have a business up and running and making you money.

All you need to do is follow the links I've provided to get your domain name, hosting and the free monthly websites service.

In the final section I've provided links to the resources I've mentioned and further coaching if you are ready to move on from here.

I hope you've found this report helpful and that it finally gets you started moving forward.

If you need any help with any part of this or just have questions please feel free to email me at my personal email address – tdgprivate@gmail.com

Kindest regards,

Trevor
